REV 1.0

Our history

It was 2013, a year that was marked by some historical events of relevance: Pope Benedict XVI announced his resignation, Nelson Mandela died, Croatia joined the European Union. Among these memorable moments, there is the birth of a young company: AK Medical. This last name must be the event that most struck you thinking about 2013, if not, I would say that it is time to get to know each other better.

Our attention was suddenly attracted by the world of e-commerce, and we didn't hesitate to try a new approach in the medical sector by opening our website. It's been 10 years of work and the challenge continues to be more intense. The market is impervious to new perspectives and the sale of medical products must keep up with the times. Following the needs of final consumers and patients, we try to select the best options available on the market without forgetting what most distinguishes us: direct dialogue and human relationship. The relationship with customers is the most important thing we care about and try to keep alive in a digital and detached society.

ISO 9001:2015 | Quality products

It is a standard that defines the requirements of a quality management system, for the purpose of conducting company processes, following codified work procedures to ensure the constancy of production and management processes and to contribute to their continuous improvement, all aimed at ensuring customer satisfaction.

ISO 13485:2021 | Quality of medical devices

It is a standard that specifies the requirements for quality management systems that allow an organization to demonstrate its ability to provide medical devices and related services that comply with customer requirements and regulatory requirements applicable to such medical devices.

CE 0425 | Compliance in the EU market

It is a certificate that indicates compliance with all the obligations incumbent on manufacturers, distributors and importers regarding their products by virtue of EU Community standards, allowing the free marketing of marked products within the European market.

Modular kits for Sterile Pap-test | GYNECOLOGY

The Pap-test is a painless exam for detecting the presence of abnormal cells in the cervix. It allows early diagnosis of cervical pathologies. The functional configuration of the kit allows immediate operation, it may contain the following types of products:

- n. 1 Speculum with side screw or central pin in various sizes
- n. 1 Wooden Ayre Spatula
- n. 1 Cotton swab
- n. 1 Brush for endocervical sampling
- n. 1 or 2 Microscope slides
- n. 1 or 2 Latex gloves for exploration
- n. 1 Minicontainer for slides
- n. 1 Probe for "Endocyte" sampling
- n. 1 Sachet of 4 ml cytological fixer

Following there are some combinations of sterile kits (**CND: U0899** and **RDM: 1382628**) that can be modified or created on request (contact the sales office for a specific quotation):

***EU Ecolabel** Certified is the European Union's ecological quality mark that distinguishes products and services which, while guaranteeing high performance standards, are characterized by a reduced environmental impact during the entire life cycle.

****FSC Recycled** Certified means that 100% of the paper fiber is recycled and at least 85% of the material comes from post-consumer waste.

*****PEFC** Certified for Sustainable Forest Management ensures that forests are managed in line with stringent environmental, social and economic requirements. Chain of custody certification tracks forest products from sustainably managed forests to the final product.

Long hospital stays | PATIENT CARE

RIGID PLASTIC HOLDER FOR IV

It has a universal size, it's shockproof and it's equipped with a closed ring quick coupling system. It engages on the stand and adapts to glass bottles, medicines or bags for infusion therapies.

SEMI-ROUND LOOP - LENGTH CM. 13

Loop electrodes coding method:

The first group of numbers indicate the shape of the electrode as follows: **0250 = Semicircular loop**

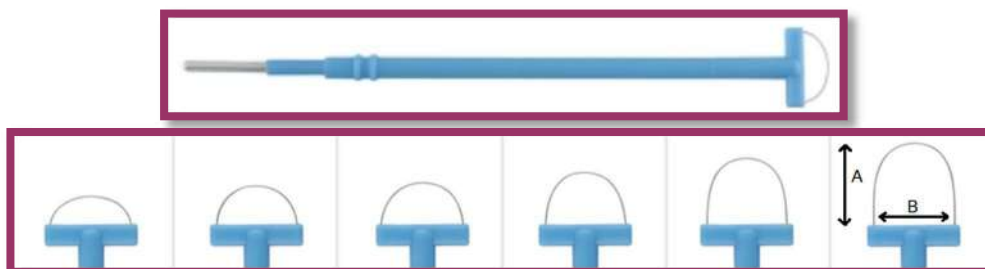

In the second group of numbers the first two digits indicate in mm. **the height (A)** and the second two **the width (B)**

The last two digits indicate **the total length (L)** of the electrode stem (-13= cm 13)

Disposable patient plates | ELECTROSURGERY

The correct positioning of the "patient plate" is extremely important in electrosurgery as it allows the correct passage of the current through the patient's body.

PEP/RMT™ FACIAL MASK

It is a method based on the application of resistance to the mouth in the expiratory phase, which, by generating a Positive Expiratory Pressure (P.E.P.) within the airways, prevents their collapse and guarantees the activation of the collateral circulation.

E.C.G. electrodes and gel | ULTRASOUND

ELECTRODES FOR E.C.G. BUTTON, WITH FOAM SUPPORT AND SEMI-LIQUID GEL

The button electrodes have a face without gel, the one not in contact with the patient's skin, a protuberance that fits inside the recess on the terminal of the patient cable. The size allows you to stimulate a larger area and obtain maximum effectiveness from electrocardiograms.
